★★★

Fund category

Canadian Focused Equity

Funds in category

584

Mutual fund categories are maintained by the Canadian Investment Funds Standards Committee (CIFSC).

Investment objective

The Fund seeks to achieve long-term capital appreciation by investing primarily in the equity securities of Canadian and U.S. companies. The Fund may invest in securities of other mutual funds (including exchange-traded funds).

This Fund may be suitable for investors who:

- seek long-term capital appreciation
- are long-term investors
- are comfortable with medium investment risk

Returns for funds less than 1 year old cannot be displayed.

3-YEAR RISK MEASURES (as of January 31, 2019)

Annualized returns are used to calculate the risk metrics below.

Standard deviation (fund)	7.78	Sharpe ratio	0.66	Alpha	-1.06
Standard deviation (category)	9.10	R²	65.05	Beta	0.69

Standard deviation is a measure of volatility; it shows how broadly returns have varied over a given time period. Generally, a high standard deviation implies greater volatility.

Sharpe ratio combines a risk measurement and a return measurement into a single number to determine a fund's risk-adjusted return. A higher value is better.

R²: reflects the percentage of a portfolio's movements that can be explained by movements in its benchmark. It is measured on a scale of 0-100.

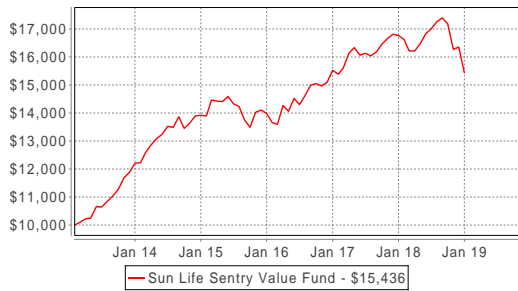

Alpha measures the difference between a fund's return and its benchmark, taking into account volatility (beta). An alpha of 1 means a fund outperformed its benchmark by 1%; -1 means the fund underperformed by 1%.

Beta measures the movement of a fund in relation to its benchmark. A beta over 1 means price moves are greater (up or down) than the benchmark's; below 1 means less extreme price moves; 1 means it moves in step with its benchmark.

Management team

Sentry Investments: Michael R. Simpson, Senior Vice President, Senior Portfolio Manager

CURRENT VALUE OF A \$10,000 INVESTMENT

Initial investment amount:

\$10000

Time frame:

Start Feb 2013

End Jan 2019

Returns for funds less than 1 year old cannot be displayed. The growth of \$10k calculator calculates an approximate rate of return using the performance information as at the first business day of each month in your chosen time-frame.

INVESTMENT MANAGEMENT APPROACH

Sentry Investments

The ultimate goal of Sentry's investment process is to provide superior risk-adjusted returns. Sentry gives portfolio managers the latitude to manage portfolios free of traditional benchmark constraints.

The investment team does all its own research, focusing particularly on strong balance sheets, growing free cash flow and return on capital. The attributes Sentry's portfolio managers look for have led to companies that have the means to engage in shareholder-friendly behaviour such as buying back shares, or paying and increasing dividends to provide the income investors need.

Sentry Investments is an independently owned, Canadian investment management company with more than \$8 billion in assets under management for Canadian investors (as at October 2012). Sentry offers a diverse range of investment products including mutual funds, closed-end funds and flow-through limited partnerships.

NOTES AND DISCLAIMERS

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus before investing. For periods greater than one year, the indicated rates of return are the historical annual compounded total returns as of the date indicated including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.

Ratings and/or ranking information is subject to change monthly.

Morningstar is an independent organization that groups funds with generally similar investment objectives for comparison purposes and ranks them on a historical basis.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

Morningstar quartile rankings show how well a fund has performed compared to all other funds in its peer group. Each fund within a peer group is ranked based on its performance, and these rankings are broken into quarters or quartiles. Within a group, the top 25% (or quarter) of the funds are in the first quartile, the next 25% are in the second quartile, the next group in the third quartile, and the bottom 25% of funds with the poorest relative performance are in the fourth quartile. The point in which half the funds had better performance and half had worse performance is the median. If 100 funds are being compared, there would be four quartiles of twenty-five funds each. The median would be the fiftieth fund.

For more details on the calculation of Morningstar star ratings or quartile rankings, please see www.morningstar.ca.

The Morningstar Style Box™ reveals a fund's investment strategy. For equity funds the vertical axis shows the market capitalization of the stocks owned and the horizontal axis shows investment style (value, blend or growth). For fixed-income funds the vertical axis shows the average credit quality of the bonds owned, and the horizontal axis shows interest rate sensitivity as measured by a bond's duration (short, intermediate or long).

Morningstar Market Capitalization Breakdown Stocks are first divided into seven style zones based on their country of domicile: United States, Latin America, Canada, Europe, Japan, Asia ex-Japan, and Australia/New Zealand. Capitalization assignments are determined as follows: 1) For all stocks in a style zone, the market cap of each stock is converted into a common currency. The stocks in each style zone are ordered in descending order by size, and a cumulative capitalization as a percentage of total sample capitalization is calculated as each stock is added to the list. 2) The stock that causes cumulative capitalization to equal or exceed 40% of the style zone's total cap is the final one assigned to the giant-cap group. 3) The largest of the remaining stocks are assigned to the large-cap group until cumulative capitalization equals or exceeds 70% of the total capitalization of the style zone. 4) The largest of the remaining stocks are assigned to the mid-cap group until cumulative capitalization equals or exceeds 90% of the total capitalization of the style zone. 5) The largest of the remaining stocks are assigned to the small-cap group until cumulative capitalization equals or exceeds 97% of the total capitalization of the style zone. 6) The remaining stocks are assigned to the micro-cap group. The Market Capitalization Breakdown at a fund level is a breakdown of the capitalization assignments of the fund's equity holdings.

Morningstar category averages are equal-weighted category returns. The calculation is simply the average of the returns for all the funds in a given category. The standard category average calculation is based on constituents of the category at the end of the period.

Categories are assigned by Canadian Investment Funds Standards Committee (CIFSC) based on an evaluation of a fund's holdings. A fund's category may change at any time. Funds within the same category may differ in terms of investment philosophy, investment process, as well as overall composition.
