

Sun Life Granite Conservative Portfolio | Series F

Current value of a \$10,000 investment

Time frame:
Start Feb 2012
End Apr 2020
\$14,083

The calculator generates an approximate rate of return using performance information as at the first business day of each month in your chosen time frame. Returns for funds less than 1 year old cannot be displayed. The default settings invest \$10,000 on the inception date of the fund, with an end date of January in the current year. For informational purposes, the initial investment amount and time frame can be adjusted according to your preference.

Investment objective

The Fund's investment objective is to seek income and capital appreciation, with a bias towards income, by investing primarily in fixed income mutual funds and, to a lesser extent, equity mutual funds.

This Fund may be suitable for investors who:

- seek income and capital appreciation, with a bias towards income
- seek diversification through a broad range of asset classes, geographies and investment styles
- are medium- to long-term investors
- are comfortable with low investment risk

3-year risk measures | as of April 30, 2020

Annualized returns are used to calculate the risk metrics below.

Standard deviation (fund)	5.89	Sharpe ratio	0.17
Alpha	-1.85	Beta	0.88

Benchmark: 43.5% FTSE Canada Universe Bond Index, 7.3% S&P/TSX Capped

Composite Index, 24.5% JPM GBI Global Hdg C\$ Index, 5.0% FTSE Canada 91 Day T-Bill Index, 19.7% MSCI World Index.

Standard deviation is a measure of volatility; it shows how broadly returns have varied over a given time period. Generally, a high standard deviation implies greater volatility.

Sharpe ratio combines a risk measurement and a return measurement into a single number to determine a fund's risk-adjusted return. A higher value is better.

Alpha measures the difference between a fund's return and its benchmark, taking into account volatility (beta). An alpha of 1 means a fund outperformed its benchmark by 1%; -1 means the fund underperformed by 1%.

Beta measures the movement of a fund in relation to its benchmark. A beta over 1 means price moves are greater (up or down) than the benchmark's; below 1 means less extreme price moves; 1 means it moves in step with its benchmark.

Notes and disclaimers

Sun Life Granite Managed Solutions invest in mutual funds and/or exchange traded funds (ETFs).

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus before investing. For periods greater than one year, the indicated rates of return are the historical annual compounded total returns as of the date indicated including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.

Compound growth calculations are used only for the purpose of illustrating the effects of compound growth and are not intended to reflect the future value of any mutual fund or returns on investment in any mutual fund.

The Morningstar Style Box™ reveals a fund's investment strategy. For equity funds the vertical axis shows the market capitalization of the stocks owned and the horizontal axis shows investment style (value, blend or growth). For fixed-income funds the vertical axis shows the average credit quality of the bonds owned, and the horizontal axis shows interest rate sensitivity as measured by a bond's duration (short, intermediate or long).

Average credit quality gives a snapshot of the fund's overall credit quality. It is an average of each fixed income security's credit rating, adjusted for its relative weighting in the fixed income portion of the fund. Morningstar, Inc. is not itself a Designated Rating Organization (DRO), nor does it issue a credit rating on the fund. A DRO's ratings can change from time-to-time.
